DIPRIVA

Where to Automate First

List five tasks your team repeats. Score each one. The highest score goes first.

Task	Hours per week	Repeatable (1 to 3)	Cost of a mistake (1 to 3)	Score
Example: Enter new client details into the CRM	*4*	*3*	*1*	*12*

Repeatable: 1 = the steps change every time. 3 = the same steps every time.
Cost of a mistake: 1 = easy to fix. 3 = expensive or hard to undo.

Score = hours per week x repeatable, divided by cost of a mistake.

Your first automation is the task with the highest score. Before you automate it, write down its steps. If you cannot list the steps, fix the process first.
